Understanding the Ross Hill SCR System

What is an SCR System?

Selective Catalytic Reduction (SCR) is a pollution control technology designed to reduce nitrogen oxides (NOx) emissions from industrial exhaust gases. It involves injecting a reductant—commonly ammonia or urea—into the exhaust stream, which then reacts with NOx gases in the presence of a catalyst to produce harmless nitrogen and water vapor.

Introduction to the Ross Hill SCR System

The Ross Hill SCR system is a specialized implementation of the SCR technology, tailored to meet the specific needs of various industrial sectors such as power generation, chemical manufacturing, and waste incineration. Developed with a focus on durability, efficiency, and ease of maintenance, the Ross Hill design incorporates advanced catalyst formulations and optimized injection strategies to maximize NOx reduction.
