Sample Multiple Choice Questions with Answers and Explanations

Below are representative MCQs covering critical aspects of international economics, along with detailed explanations to enhance understanding.

Question 1: Which of the following best explains the principle of comparative advantage?

- a) Countries should produce only goods in which they have an absolute advantage.
- b) Countries should specialize in goods where they have the lowest opportunity cost.
- c) Countries should produce all goods domestically to avoid trade deficits.
- d) Trade benefits are maximized when countries impose tariffs.

Answer: b) Countries should specialize in goods where they have the lowest opportunity cost.

Explanation:

The principle of comparative advantage, formulated by David Ricardo, suggests that countries gain from trade when they specialize in producing goods for which they have the lowest opportunity cost compared to others. This leads to overall efficiency and increased welfare, even if one country is absolutely more efficient across all goods.

Question 2: A country has a trade deficit. Which of the following is most likely true?

- a) It is importing more than it is exporting.
- b) Its capital account is in surplus.
- c) Its currency is undervalued.
- d) It is experiencing a trade surplus.

Answer: a) It is importing more than it is exporting.

Explanation:

A trade deficit occurs when a country's imports exceed its exports. This can be financed through capital inflows, such as foreign investment, but the immediate characteristic is the imbalance in trade flow.

Question 3: Under a fixed exchange rate system, which of the following actions is a country most likely to take to prevent its currency from depreciating?

- a) Increase interest rates to attract foreign capital.
- b) Intervene in the foreign exchange market by selling its currency.
- c) Lower interest rates to stimulate exports.
- d) Allow the currency to float freely.

Answer: b) Intervene in the foreign exchange market by selling its currency.

Explanation:

In a fixed exchange rate system, to prevent depreciation, a country's central bank may intervene by selling its currency in the foreign exchange market, thus reducing supply and supporting the currency's value. Increasing interest rates can also attract foreign capital but is more indirect; direct intervention is the hallmark of fixed rate management.

Question 4: According to Purchasing Power Parity (PPP), what should happen if a country's price level increases relative to another country?

- a) Its currency should depreciate in the long run.
- b) Its currency should appreciate in the long run.
- c) The exchange rate will remain unaffected.
- d) The country should reduce tariffs.

Answer: a) Its currency should depreciate in the long run.

Explanation:

PPP posits that exchange rates adjust so that identical goods cost the same in different countries when prices are converted at the current exchange rate. Therefore, if a country's price levels rise relative to another, its currency should depreciate to restore parity.

Question 5: Which international organization primarily oversees global trade rules and resolves trade disputes?

- a) International Monetary Fund (IMF)

- b) World Bank
- c) World Trade Organization (WTO)
- d) Organization for Economic Cooperation and Development (OECD)

Answer: c) World Trade Organization (WTO)

Explanation:

The WTO is responsible for regulating international trade, establishing trade agreements, and resolving disputes among member countries. The IMF focuses on monetary cooperation and financial stability, while the World Bank deals with development projects.

Advanced Topics and Their MCQ Applications

Trade Policy Instruments

- Tariffs: Taxes on imports aimed at protecting domestic industries or generating revenue.
- Quotas: Limits on the quantity of goods imported or exported.
- Subsidies: Financial support to domestic industries to enhance competitiveness.

Sample Question:

Which of the following is a non-tariff barrier to trade?

- a) Quota
- b) Excise tax
- c) Export subsidy
- d) Import tariff

Answer: a) Quota

Explanation:

Quotas restrict the quantity of goods, serving as a non-tariff barrier. Taxes and tariffs are fiscal measures; subsidies are financial support, not barriers.

Foreign Exchange Market Dynamics

- Spot and forward markets
- Exchange rate determination
- Speculation and hedging

Sample Question:

If investors expect the domestic currency to depreciate in the future, what might they do today?

- a) Buy foreign currency in the spot market
- b) Sell foreign currency in the forward market
- c) Hold domestic currency
- d) Increase domestic interest rates

Answer: a) Buy foreign currency in the spot market

Explanation:

Anticipating depreciation, investors buy foreign currency now to avoid losses later, leading to increased demand for foreign currency.
