Foundations of Adrian Bejan's Approach to Thermal Design

The Constructal Law: A Fundamental Principle

At the heart of Bejan's work lies the Constructal Law, a groundbreaking principle stating that for a system to evolve and improve its flow architecture, it must facilitate easier access to flows. In essence, natural and engineered systems tend to evolve structures that optimize the movement of fluids, heat, and mass.

The Constructal Law can be summarized as:

- Flow systems evolve to minimize resistance.
- Designs favor configurations that allow easier and more efficient flow.
- This evolution enhances the system's overall performance and lifespan.

By applying this law, engineers can develop thermal systems that naturally favor optimized heat transfer pathways, leading to energy savings and improved efficiency.

Flow Architecture and Its Role in Thermal Systems
