Question 1: Architectural Styles

Question: Which architectural style is most appropriate for a real-time data processing system requiring high throughput and low latency?

- A. Layered Architecture
- B. Microservices Architecture
- C. Event-Driven Architecture
- D. Monolithic Architecture

Answer: C. Event-Driven Architecture

Analysis:

Event-driven architecture (EDA) is designed to handle real-time data streams efficiently. It facilitates asynchronous communication, which is crucial for low latency and high throughput systems such as financial trading platforms or sensor networks. While microservices can support scalability, EDA is specifically optimized for real-time, event-based data processing.
