Question What is pre-algebra, and why is it important? Pre-algebra is a foundational math course that prepares students for algebra by teaching basic concepts like integers, fractions, and simple equations. It is important because it builds the skills needed for higher-level math courses. **What are prime numbers, and how do I identify them?** Prime numbers are numbers greater than 1 that have no divisors other than 1 and themselves. To identify them, check if the number can only be divided evenly by 1 and itself without a remainder. **How do I simplify fractions?** To simplify a fraction, find the greatest common divisor (GCD) of the numerator and denominator and divide both by that number. Repeat if necessary until the fraction is in its simplest form. **What is the order of operations in basic math?** The order of operations is Parentheses, Exponents, Multiplication and Division (from left to right), Addition and Subtraction (from left to right). Remembered by the acronym PEMDAS. **How do I solve basic linear equations?** To solve a linear equation, isolate the variable on one side of the equation by performing inverse operations, such as adding/subtracting or multiplying/dividing both sides equally. **What is a ratio, and how is it different from a fraction?** A ratio compares two quantities and shows how many times one value contains another. While both are written with a colon (e.g., 3:4), a ratio compares quantities, whereas a fraction shows part of a whole. **How do I convert between decimals, fractions, and percentages?** To convert a decimal to a fraction, write it over a power of 10 and simplify. To convert a fraction to a decimal, divide the numerator by the denominator. To convert a decimal to a percentage, multiply by 100 and add the % sign. **What is an integer, and how is it different from a whole number?** An integer includes all positive and negative whole numbers, including zero. Whole numbers are non-negative integers (0, 1, 2, 3, ...). The key difference is that integers include negative numbers, while whole numbers do not. **How do I find the least common denominator (LCD) for adding fractions?** To find the LCD of fractions, determine the least common multiple (LCM) of their denominators. Then, convert each fraction to an equivalent fraction with the LCD as the denominator before adding or subtracting.
